

COASTAL CITY ENERGY RESILIENCE REPORT

A synthetic 20-page PDF fixture with a deliberately unnumbered cover and contents page

Test corpus • 2026 edition • visual + text extraction benchmark

Table of Contents

The cover and this contents page are excluded from printed numbering. The PDF therefore has 20 physical pages but only 18 printed content pages.

Section	Printed page
Baseline Energy Demand	1
Heat Stress and Peak Load	2
Solar Resource Mapping	3
Wind Exposure Along the Coast	4
Building Envelope Retrofits	5
District Cooling Options	6
Battery Storage Scenarios	7
Microgrid Islanding	8
Critical Facility Priorities	9
Water-Energy Interactions	10
Public Realm Shading	11
Transport Electrification	12
Demand Response Programs	13
Grid Resilience Metrics	14
Emergency Operating Modes	15
Community Cooling Hubs	16
Phased Investment Plan	17
Monitoring and Review	18

Baseline Energy Demand

Printed page 1 • parser marker PDF-P01

Resilience decisions become easier to compare when the baseline, stress case, and fallback mode are stated separately.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	81	104
Critical load share	23%	28%
Target reserve margin	12%	18%

Planning notes

- Use staged investments so early monitoring can inform later capital decisions.
- Prioritize services that protect health, communications, water, and emergency operations.
- Preserve geographic context when summarizing site-specific interventions.
- Treat storage duration and recharge time as different design variables.

Parser fixture note

The unique token PDF-P01-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Heat Stress and Peak Load

Printed page 2 • parser marker PDF-P02

Resilience decisions become easier to compare when the baseline, stress case, and fallback mode are stated separately.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	82	105
Critical load share	26%	32%
Target reserve margin	14%	20%

Planning notes

- Record the assumptions behind every scenario so later revisions remain comparable.
- Prioritize services that protect health, communications, water, and emergency operations.
- Use staged investments so early monitoring can inform later capital decisions.
- Treat storage duration and recharge time as different design variables.

Parser fixture note

The unique token PDF-P02-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Solar Resource Mapping

Printed page 3 • parser marker PDF-P03

Resilience decisions become easier to compare when the baseline, stress case, and fallback mode are stated separately.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	83	106
Critical load share	29%	36%
Target reserve margin	16%	22%

Planning notes

- Separate normal demand from heat-wave demand before sizing backup systems.
- Treat storage duration and recharge time as different design variables.
- Record the assumptions behind every scenario so later revisions remain comparable.
- Preserve geographic context when summarizing site-specific interventions.

Parser fixture note

The unique token PDF-P03-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Wind Exposure Along the Coast

Printed page 4 • parser marker PDF-P04

Resilience decisions become easier to compare when the baseline, stress case, and fallback mode are stated separately.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	84	107
Critical load share	32%	40%
Target reserve margin	10%	16%

Planning notes

- Prioritize services that protect health, communications, water, and emergency operations.
- Preserve geographic context when summarizing site-specific interventions.
- Treat storage duration and recharge time as different design variables.
- Separate normal demand from heat-wave demand before sizing backup systems.

Parser fixture note

The unique token PDF-P04-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Building Envelope Retrofits

Printed page 5 • parser marker PDF-P05

Resilience decisions become easier to compare when the baseline, stress case, and fallback mode are stated separately.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	85	108
Critical load share	35%	24%
Target reserve margin	12%	18%

Planning notes

- Separate normal demand from heat-wave demand before sizing backup systems.
- Use staged investments so early monitoring can inform later capital decisions.
- Treat storage duration and recharge time as different design variables.
- Prioritize services that protect health, communications, water, and emergency operations.

Parser fixture note

The unique token PDF-P05-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

District Cooling Options

Printed page 6 • parser marker PDF-P06

This page isolates one planning question so a parser can recover both visual structure and embedded text.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	86	109
Critical load share	20%	28%
Target reserve margin	14%	20%

Planning notes

- Preserve geographic context when summarizing site-specific interventions.
- Record the assumptions behind every scenario so later revisions remain comparable.
- Use staged investments so early monitoring can inform later capital decisions.
- Prioritize services that protect health, communications, water, and emergency operations.

Parser fixture note

The unique token PDF-P06-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Battery Storage Scenarios

Printed page 7 • parser marker PDF-P07

The analysis uses synthetic values and is intended only as a deterministic document-processing fixture.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	87	110
Critical load share	23%	32%
Target reserve margin	16%	22%

Planning notes

- Preserve geographic context when summarizing site-specific interventions.
- Prioritize services that protect health, communications, water, and emergency operations.
- Treat storage duration and recharge time as different design variables.
- Separate normal demand from heat-wave demand before sizing backup systems.

Parser fixture note

The unique token PDF-P07-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Microgrid Islanding

Printed page 8 • parser marker PDF-P08

The analysis uses synthetic values and is intended only as a deterministic document-processing fixture.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	88	111
Critical load share	26%	36%
Target reserve margin	10%	16%

Planning notes

- Record the assumptions behind every scenario so later revisions remain comparable.
- Prioritize services that protect health, communications, water, and emergency operations.
- Treat storage duration and recharge time as different design variables.
- Use staged investments so early monitoring can inform later capital decisions.

Parser fixture note

The unique token PDF-P08-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Critical Facility Priorities

Printed page 9 • parser marker PDF-P09

This page isolates one planning question so a parser can recover both visual structure and embedded text.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	89	112
Critical load share	29%	40%
Target reserve margin	12%	18%

Planning notes

- Preserve geographic context when summarizing site-specific interventions.
- Record the assumptions behind every scenario so later revisions remain comparable.
- Use staged investments so early monitoring can inform later capital decisions.
- Separate normal demand from heat-wave demand before sizing backup systems.

Parser fixture note

The unique token PDF-P09-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Water-Energy Interactions

Printed page 10 • parser marker PDF-P10

The analysis uses synthetic values and is intended only as a deterministic document-processing fixture.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	90	113
Critical load share	32%	24%
Target reserve margin	14%	20%

Planning notes

- Prioritize services that protect health, communications, water, and emergency operations.
- Treat storage duration and recharge time as different design variables.
- Record the assumptions behind every scenario so later revisions remain comparable.
- Separate normal demand from heat-wave demand before sizing backup systems.

Parser fixture note

The unique token PDF-P10-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Public Realm Shading

Printed page 11 • parser marker PDF-P11

Each section includes a unique marker that can be matched against the page image and extracted text.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	91	114
Critical load share	35%	28%
Target reserve margin	16%	22%

Planning notes

- Use staged investments so early monitoring can inform later capital decisions.
- Record the assumptions behind every scenario so later revisions remain comparable.
- Separate normal demand from heat-wave demand before sizing backup systems.
- Prioritize services that protect health, communications, water, and emergency operations.

Parser fixture note

The unique token PDF-P11-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Transport Electrification

Printed page 12 • parser marker PDF-P12

Resilience decisions become easier to compare when the baseline, stress case, and fallback mode are stated separately.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	92	115
Critical load share	20%	32%
Target reserve margin	10%	16%

Planning notes

- Separate normal demand from heat-wave demand before sizing backup systems.
- Use staged investments so early monitoring can inform later capital decisions.
- Preserve geographic context when summarizing site-specific interventions.
- Treat storage duration and recharge time as different design variables.

Parser fixture note

The unique token PDF-P12-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Demand Response Programs

Printed page 13 • parser marker PDF-P13

This page isolates one planning question so a parser can recover both visual structure and embedded text.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	93	116
Critical load share	23%	36%
Target reserve margin	12%	18%

Planning notes

- Treat storage duration and recharge time as different design variables.
- Preserve geographic context when summarizing site-specific interventions.
- Record the assumptions behind every scenario so later revisions remain comparable.
- Prioritize services that protect health, communications, water, and emergency operations.

Parser fixture note

The unique token PDF-P13-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Grid Resilience Metrics

Printed page 14 • parser marker PDF-P14

The analysis uses synthetic values and is intended only as a deterministic document-processing fixture.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	94	117
Critical load share	26%	40%
Target reserve margin	14%	20%

Planning notes

- Preserve geographic context when summarizing site-specific interventions.
- Use staged investments so early monitoring can inform later capital decisions.
- Record the assumptions behind every scenario so later revisions remain comparable.
- Separate normal demand from heat-wave demand before sizing backup systems.

Parser fixture note

The unique token PDF-P14-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Emergency Operating Modes

Printed page 15 • parser marker PDF-P15

This page isolates one planning question so a parser can recover both visual structure and embedded text.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	95	118
Critical load share	29%	24%
Target reserve margin	16%	22%

Planning notes

- Preserve geographic context when summarizing site-specific interventions.
- Prioritize services that protect health, communications, water, and emergency operations.
- Separate normal demand from heat-wave demand before sizing backup systems.
- Record the assumptions behind every scenario so later revisions remain comparable.

Parser fixture note

The unique token PDF-P15-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Community Cooling Hubs

Printed page 16 • parser marker PDF-P16

This page isolates one planning question so a parser can recover both visual structure and embedded text.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	96	119
Critical load share	32%	28%
Target reserve margin	10%	16%

Planning notes

- Record the assumptions behind every scenario so later revisions remain comparable.
- Use staged investments so early monitoring can inform later capital decisions.
- Separate normal demand from heat-wave demand before sizing backup systems.
- Prioritize services that protect health, communications, water, and emergency operations.

Parser fixture note

The unique token PDF-P16-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Phased Investment Plan

Printed page 17 • parser marker PDF-P17

The analysis uses synthetic values and is intended only as a deterministic document-processing fixture.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	97	120
Critical load share	35%	32%
Target reserve margin	12%	18%

Planning notes

- Record the assumptions behind every scenario so later revisions remain comparable.
- Treat storage duration and recharge time as different design variables.
- Use staged investments so early monitoring can inform later capital decisions.
- Preserve geographic context when summarizing site-specific interventions.

Parser fixture note

The unique token PDF-P17-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.

Monitoring and Review

Printed page 18 • parser marker PDF-P18

Resilience decisions become easier to compare when the baseline, stress case, and fallback mode are stated separately.

Scenario snapshot

Metric	Baseline	Stress case
Peak demand index	98	121
Critical load share	20%	36%
Target reserve margin	14%	20%

Planning notes

- Prioritize services that protect health, communications, water, and emergency operations.
- Preserve geographic context when summarizing site-specific interventions.
- Treat storage duration and recharge time as different design variables.
- Record the assumptions behind every scenario so later revisions remain comparable.

Parser fixture note

The unique token PDF-P18-END should remain on this physical page. It is useful for testing page-aware text extraction, table-of-contents lookup, and six-up collage mapping.
